Profile

In 2018 I obtained my Ph.D. in philosophy. After that, the focus of my professional interests has shifted to web development. Today, I am a enthusiastic front-end developer, and I am very excited about coding websites from scratch.

I create semantic, SEO friendly HTML5 structure of the project, styling it with CSS3 in accordance with BEM methodology, DRY and Responsive Web principles, using SASS as a pre-processor. I am also familiar with Bootstrap and experienced with practice of using WordPress as a headless CMS.

I am highly organized and possess excellent time management skills. With my great attention to detail and a high level of perfection, I am dedicated to delivering high quality and functionality. I have excellent interpersonal skills and a team-oriented personality, but I am also an independent thinker with a keen sense of design. In addition to this, I am highly proficient in spoken and written English.
